

ASTON FEARON

Sound Engineer

Location, Broadcast and Comms Portfolio

Bio

I am familiar with location work on set as well as the demands of multi-camera outside broadcast work; having worked in a variety of genres including documentary, sport, medical, politics and corporate. Undertaking work as a Location Sound Recordist, Boom Operator, Sound Assistant, Sound Supervisor and Comms Engineer; I understand the importance of working professionally and efficiently to a production schedule.

Setting up and managing co-ord circuits, delivering clean feeds/mix minuses, micing up talent, providing Comtek/IEM feeds, rigging FX mics, mixing program sound and delivering feeds to audience PA systems; the work that I have done has been watched via public live streaming, national television and internal broadcast nationally and internationally.
